Live from the Cape May Hawkwatch!  
Week 8 Extensions

- **Science:** Red-tailed Hawks are common, and widespread across North America. There are several different color morphs within this species. Look at the variation among Red-Tailed Hawks. Which characteristics remain consistent among all of them?

- **Math:** Use trektellen to look at data collected on the final day of the Cape May Hawkwatch season (November 30th) over the last several years. Which species are typically still observed migrating so late in the season? Why do you think these species are in less of a hurry than the early season migrants?

- **Language Arts:** Sit quietly and still, outside at night (in a safe location!) for at least 10 minutes. Record any sounds you hear. If you don’t know what they are, just describe them. How does being outdoors at night make you feel?

- **Social Studies:** Nocturnal migrants may use the rotational pattern of the stars to help them navigate. Research how humans have used stars for navigation, story-telling, and other purposes throughout history.
